**Revised Inventory Sheet - 1-5 Clement
Street, Rushcutters Bay**

Item Name 1–5 Clement Street, excluding apartment interiors			
Address	1–5 Clement Street, Rushcutters Bay	Lot number	Lot A DP 71162, Lot B DP 71162, Lot C DP 71162, Lots 1–25 SP 10641
Architect	Ancher Mortlock Murray & Woolley	Construction date	1975
Builder	Penrith Estate Pty Ltd		
Listings	Sydney Local Environmental Plan 2012: Within the Elizabeth and Rushcutters Bays Heritage Conservation Area (HCA) (C20), identified as detracting on the Sydney Development Control Plan 2012 building contributions map.		

Historical overview

The Cadigal people of the Eora nation have lived in the Sydney area for thousands of years and have shaped its landscape and nurtured its plants and animals. The Cadigal people called Rushcutters Bay 'Kogerah'. It was a place where Aboriginal people and Europeans gathered rushes, used respectively for crafting light-weight fishing spears and for thatching settler huts. According to Dr Paul Irish, settlers were cutting rushes in this bay within weeks of the arrival of Europeans in Australia in 1788.¹ Irish further records several different Aboriginal settlements, at different times, occupying land on either side of the Rushcutters Creek (through the present Rushcutters Bay Park) and on higher grounds on either side of the bay.

The subject site is located on part of Obed West's Barcom Glen Estate where he erected a watermill in the then-named Lacrozia Valley. Obed died in 1891 at Barcom Glen, Paddington, survived by a large family. Clement Street was formed between 1901 and 1907 and three brick detached houses were built on the site in this period. The houses on the site were demolished by mid-1973.

In 1971 Arthur Brooks Gange of SB Gange & Son Pty lodged a development application (DA) to Council to erect a building containing 36 two-bedroom flats on nine floors with parking on the lower ground floor, estimated to cost \$400,000. The architect for this development proposal was Graeme Bastock of Pymble. For unknown reasons this application did not proceed as in 1973 SB Gange & Son Pty Ltd notified Council that it had sold the properties at 1–5 Clement Street to Penrith Estate Pty Ltd.

In October 1973 Ancher Mortlock Murray & Woolley Pty Ltd (AMMW) submitted a DA for permission to erect a multistorey residential flat building (eight floors comprising 25 flats) at 1–5 Clement Street for the new owners (DA 595/73). The estimated cost of the proposed building was \$560,000.

A petition was lodged in reference to the proposed development. The main objections concerned residential amenity, substantial change to the character of the street, impact on park views and the supply of air and sunshine, impediments to vehicular and pedestrian access, and it being an inappropriate form of development for a cul-de-sac. It was also highlighted that the site was located in the new Foreshore Protection Area. The State Planning Authority also criticised the design, seeking more details of proposed landscaping and other amendments to the design in terms of taking general landform into consideration and reducing the height of boundary walls.

The architects responded to these criticisms with a revised design, with the response signed by AMMW partner Stuart Murray. In December 1973 the Council approved the DA subject to several conditions, including landscaping controls and provision for the widening of Clement Lane. The detailed landscape plan was submitted to Council in April 1974 and included specifications for the transplanting of three palm trees to the boundary of the site. At the same time the architects lodged the building application (BA) for the apartment building consisting of reinforced concrete with precast concrete infill panels, estimated to cost \$400,000. The BA was approved in July 1974.

Historical overview

Each apartment (aside from the penthouse) was identical at approximately 100sqm with two bedrooms and the building was well fitted with two lifts, representing a shift in the area away from short stay accommodation and compact studio apartments.

The building was completed by May 1976 and sold as strata titled units. At this time 1–5 Clement Street was advertised to ‘discerning purchasers [who] will respect and prize these impeccably built, intriguingly designed, infinitely beautiful, brand new 2-bedroom strata units’. Another advertisement described the property as ‘extraordinary units [with] devastating combination of latest design and construction techniques’.¹

Anchor Mortlock Murray & Woolley

“The firm of Anchor Mortlock Murray and Woolley (as it was named from 1964 to 1976) is widely recognised as one of the leading practices in Sydney. For instance in the R.A.I.A booklet (Apperley & Lind) *444 Sydney Buildings* it claims the largest number of entries, and there are several more entries for individual partners.”²

The firm began in 1952 when Sydney Anchor (1904–1979) invited Bryce Mortlock (1921–2004) and Stuart Murray (1926–2015) to join him as Anchor Mortlock & Murray. The firm grew throughout the 1950s and early 1960s, receiving commissions from domestic designs to large commercial, civic and educational building designs such as five engineering buildings at the University of Sydney. In 1964 Ken Woolley joined the firm, becoming a director in 1969, changing the firm’s name to Anchor Mortlock Murray & Woolley (AMMW). The firm continued to be commissioned for significant buildings including the Student Union for Newcastle University (Murray 1968), townhouses in Wollstonecraft, Mosman and Darling Point (Woolley 1968), and Town Hall House, Sydney (Woolley 1970).

The firm’s projects and awards were numerous, including the Australian Institute of Architect’s Sulman and Wilkinson Awards (Woolley alone received 36 AIA awards during his career). The firm continued to undertake prestigious projects throughout the 1980s and 1990s with Woolley stepping away in 2005. The firm merged with Conrad Gargett Riddell in 2013.

The plans of 1–5 Clement Street are not signed but AMMW partner Stuart Murray is the signatory on a number of letters regarding the project that are located in the council files. Murray spent his early years at the firm realising Anchor’s designs, including for 150 houses off Northbourne Avenue in Canberra. One of his major designs was the Great Hall, University of Newcastle (1970) and the Aeronautics & Mechanical Engineering Buildings at Sydney University. Like Anchor, Murray was influenced by International style modernism and time working in London and travel through Europe, rather than the Sydney School of architecture practiced by Woolley and Mortlock. Murray left the practice in 1976.

Description

GML undertook a limited external-only site visit from the public domain on 4 September 2024. The physical assessment is based on this site inspection and all available documentation of the site.

Setting and context

1–5 Clement Street is located on the northern side of Clement Street, a short dead-end street off Waratah Street. The street is steep, sloping downwards to the east along Clement Street. The adjacent Clement Lane, a private road, runs along the east of the site.

The apartment building is located within the Elizabeth and Rushcutters Bays HCA. The HCA within the immediate vicinity of the site is characterised by mixed development. A number of Victorian dwellings and interwar flat buildings are located directly across Clement Street, while multistorey postwar and contemporary apartments of comparable form and scale to 1–5 Clement Street are located to the north, east and west.

¹ ‘Discerning purchasers’, Sydney Morning Herald, 19 June 1976, Sydney Morning Herald Archive 1955-1995, State Library of NSW.

² Saunders & Burke, *Anchor Mortlock Murray Woolley; Sydney Architects 1946-1976*, 1976, P.4

Description

Views to and from the flat building from the street are generally obscured by mature plantings with only partial oblique views available. The building is in proximity to Waratah Street Reserve, Reg Bartley Oval and Rushcutters Bay Park; however, there are very limited views to and from these areas due to the density of trees and other multistorey apartment buildings.

Physical description

1–5 Clement Street is a nine-storey late-modern style building comprising an open undercroft ground floor, six floors of units, a penthouse, rooftop plant room and underground carpark accessed via a rear ramp. A U-shaped concrete driveway in front of the building provides vehicle and pedestrian access. Clement Lane, to the east, forms a ramp to the underground carparking.

The building has a symmetrical rectangular form, constructed of reinforced concrete columns, edge beams and floor slabs expressed externally. Walls and spandrels are symmetrical precast concrete panels with a textured finish. The building is set above ground level on thin pilotis set back from the exterior of the building, accentuating the impression that the structure is floating. The entry is via steps and a pedestrian bridge. Unlike many other buildings of this period the undercroft is fully landscaped with low growing greenery.

The entry walling, lobby, central lift and stair core is of board-formed concrete. The lift and stair core, containing two lifts, is of slipform reinforced concrete and rises two–three storeys above the roof. A large circular cut-out is a feature of the lift overrun at the roof and is repeated in a circular window in the eastern wall of the lift lobby. The rear of the site steps down and contains a pool area and lawn surrounded by mature plantings.

The front and rear (south and north) elevations are identical. They are defined by two vertical rows of narrow deep, cantilevered concrete balconies of a concrete slab floor and concrete side balustrades. The front balustrade is frameless glass with a metal balustrade. All elevations have narrow bronze-coloured aluminium window bands with concrete spandrel panels. The corners feature wrap around window elements. The side (east and west) elevations are symmetrical and feature four columns of windows (two along the edges and two in the centre).

Units are arranged around a central lift, stairs and services core eliminating the need for exterior access galleries or corridors. There are four identical units on each of the six floors arranged axially with division walls in a cross pattern.

Internally, each unit contains two bedrooms and a living/dining room, kitchen, bathroom, and separate toilet. The living/dining room and bathroom are divided by curved partition walls. Internal partition walls are plasterboard clad steel stud walls. Windows and sliding doors to the balconies are aluminium framed.

The underground carpark occupies the entire lot area and has space for 42 cars. It is constructed of concrete walls cast in situ with sawn board finish.

Landscaping

The whole of site at ground level is landscaped and features mature trees at the front. The rear of the site contains a recreation space, swimming pool, paving and grassed area with mature trees.

Modifications/integrity

Council records do not indicate any majors works to 1–5 Clement St except for the interior renovation of a flat in 1993.

Condition

Externally, 1–5 Clement Street appears to be in good condition with a high level of integrity. The lobby area appears to be intact. Interiors were not inspected and their condition is unknown.

Comparative analysis

1–5 Clement Street adopts a conventional approach to its site, with a tower form of four apartments per floor, set to the height limits at the time of construction. Notably its underground carparking and generous setback from the street front has allowed for a landscaped setting that is rare in apartment buildings of this period in the local area. For example, all comparable Harry Seidler & Associates projects in the vicinity, with an absence of

Comparative analysis

underground carparking, have dedicated their setting to carparking at the expense of landscaping.

When compared with other highly regarded housing projects by AMMW—for example The Penthouses (1967) in Darling Point Road, Darling Point, with a design attributed to Ken Woolley; Townhouses (1968–1971) at 20 Almora Stret, Mosman, attributed to Bryce Mortlock, and Deepdene (1970), Elizabeth Bay Road, Elizabeth Bay, attributed to Stuart Murray—1–5 Clement Street shows less innovation.

The Penthouses ranges from two-storey terrace forms at the northern end (61 New Beach Road) to larger five-storey apartment buildings with the complex stepped down the slope between Yarranabbe Road and New Beach Road. The complex is also finished in glazed terracotta tiles and with timber detailing, evoking a housing typology. The Mosman Townhouses also

demonstrate exploration of lower-scale housing typologies and provide varied units within the one complex.

1–5 Clement Street seems to have been designed or directed by Stuart Murray and hence may be compared with the 1970 Deepdene Apartments, Elizabeth Bay Road, Elizabeth Bay, a notable and highly regarded apartment building of the period, included in the Australian Institute of Architects (NSW Chapter) Register of Significant Buildings. However, Deepdene, a vertical townhouse with highly sculptural form, shares few characteristics with 1–5 Clement Street.

During the 1970s AMMW was mostly awarded for their Pettit & Sevitt Houses in the low and medium cost categories and large-scale projects completed at the University of Newcastle and the University of Sydney. Town Hall House, 1970–1977, designed for the historic precinct of the Sydney Town Hall and the Cathedral of St Andrew was another high-profile project of the period. Overall during this period the firm was not known for residential flat buildings, making 1–5 Clement Street a rare example of their work.

Among Murray's celebrated projects from his time at AMMW are Northbourne Avenue housing, Canberra, Great Hall, University of Newcastle (1970) and the Aeronautics & Mechanical Engineering Buildings at Sydney University. No other similar apartment project by Murray has been identified.

1–5 Clement Street shows innovation in its construction and planning, utilising a simplified concrete frame and precast panels and balcony elements. Its planning also shows innovation with corner apartments, sensitively handled fenestration, curved bathroom forms and generous projecting balcony elements. The communal entry sequence is well resolved and remains intact. Overall, the building demonstrates a high degree of creative and technical achievement as an example of a residential flat building from the 1970s.

While 1–5 Clement Street was not published in the architectural press and is not included in *Ancher Mortlock Murray Woolley: Sydney Architects 1946–1976* by David Saunders and Catherine Burke, Power Institute of Fine Arts, University of Sydney (1976), it is considered a good representative example of the firm's work, and particularly of Murray's work, which is rare.

Assessment of significance

Criterion A (Historic significance)

1–5 Clement Street is an example of a modern mid-rise residential flat building and reflects the changing development, built environment and demographic of the Rushcutters Bay, Potts Point and Elizabeth Bay areas through the mid-twentieth century along with others of its type in the area. However, independently, the building is not a key example of these changes.

The property does not have cultural significance at a local or state level under this criterion.

Criterion B (Historical association)

1–5 Clement Street is associated with architecture firm AMMW, known for their work on numerous significant buildings throughout NSW including University of Sydney engineering buildings, townhouses in Wollstonecraft, Mosman and Darling Point, and Town Hall House.

Assessment of significance

	The project architect of 1–5 Clement Street is unknown, but it is thought to be Stuart Murray. The project was not published or otherwise promoted by the firm and hence is not considered to have a particularly strong or enduring association with the firm or Murray. The property does not have cultural significance at a local or state level under this criterion.
Criterion C (Aesthetic/creative/technical achievement)	1–5 Clement Street is considered a good representative example of a late-modern residential apartment building demonstrating creative and technical achievement. The concrete frame and central lift and stair core of the building reduces the number of load-bearing internal walls and the need for corridors, maximising unit space. Use of concrete frame and precast building elements are simply treated. Apartments are well planned with distinctive curved bathroom walls. The entry sequence and lobby of board-formed concrete and circular window element are well resolved and remain intact. The underground carpark makes full use of the lot area and frees up the ground floor for landscaping, which makes a positive contribution to streetscape. The property has cultural significance at a local level under this criterion. The property does not have cultural significance at a state level under this criterion.
Criterion D (Social, cultural and spiritual significance)	1–5 Clement Street is not known to have special associations with a particular group or to have contemporary esteem within the local community beyond housing amenity. The property does not have cultural significance at local or state level under this criterion.
Criterion E (Research potential)	1–5 Clement Street is not considered to have the potential to yield significant further or new information related to the work of AMMW not available elsewhere. The property does not have cultural significance at a local or state level under this criterion.
Criterion F (Rare)	1–5 Clement Street is not considered a rare example of a mid-twentieth century modernist apartment in Sydney or a rare example of the work of AMMW who were prolific in this period. The property does not have cultural significance at a local or state level under this criterion.
Criterion G (Representative)	1–5 Clement Street has representative significance as a late modernist residential apartment building in the Rushcutters Bay, Elizabeth Bay and Potts Point area. It displays the principal characteristics of this class of cultural places, including use of expressed concrete construction, efficient structural systems, regular façade arrangements, repeated building elements and planning that provides high amenity units. In this way 1–5 Clement Street is able to demonstrate the evolution of residential apartment buildings in the area, which are an important feature of the local built environment. 1–5 Clement Street is able to demonstrate a way of life that has been important in the social and historical development of the Rushcutters Bay, Elizabeth Bay and Potts Point area.

Assessment of significance

1–5 Clement Street can be seen as a good representative example of the work of AMMW in this period when they were prolific and highly regarded.

The property **has** cultural significance at a local level under this criterion.

The property does not have cultural significance at a state level under this criterion.

Statement of significance

1–5 Clement Street is a good representative example of the 1970s work of AMMW, a time when the firm was prolific and highly regarded. Thought to have been designed by Stuart Murray, it is a good representative example of the work of a notable designer from this period.

1–5 Clement Street has aesthetic significance for its technical and creative innovations in design and planning including use of expressed concrete construction, efficient structural systems, regular façade arrangements, repeated building elements and efficient planning to maximise amenity to individual units. It is a highly resolved design with entry sequence and entry lobby that are intact and able to be appreciated. It is particularly well resolved at ground level with generous landscaped areas that make a positive contribution to the streetscape.

1–5 Clement Street is considered to have representative significance as a late modernist residential apartment building in the Rushcutters Bay, Elizabeth Bay and Potts Point area. It displays the principal characteristics of this class of cultural places and is able to demonstrate the evolution of residential apartment buildings in the area, which are an important feature of the local built environment.

Recommendations

1–5 Clement Street meets the threshold for local heritage significance under aesthetic and representative criteria.

It is recommended for heritage listing on the Sydney Local Environmental Plan.

Heritage approval pathway

The best way to conserve the heritage significance of places is to carry out minor works and regular maintenance and repairs.

Most minor works or maintenance works that do not affect the significance of a heritage item don't require development approval. However, consent is generally required for other works to be carried out on heritage items or items within heritage conservation areas. The following provides guidance as to when development approval is required.

Local heritage exemption

When undertaking minor works you need to apply for a local heritage exemption and receive written confirmation from us (Council) before you start.

This includes 'like-for-like' replacement or rectification works, and minor or maintenance works, for example replacing failing gutters, replacement of downpipes to match original details or the upgrading of services.

Requests for local heritage exemptions should be lodged online using our ePlanning service. Fees may apply. (<https://www.cityofsydney.nsw.gov.au/development-applications/gain-exemption-development-consent-heritage-works>)

Development approval

Works of a more complex nature or that impact the fabric of the place, alter its external appearance or make changes to common areas require planning consent. In many cases these works will be approved after their potential heritage impacts have been assessed through a Statement of Heritage Impact (<https://www.environment.nsw.gov.au/publications/guidelines-preparing-statement-heritage-impact>).

This process requires submission of a development application through the NSW Planning Portal. When you are preparing an application, we (Council) can provide general advice about planning controls, application requirements and fees, and help identify potential issues including through our duty planner or pre-lodgement advice service (<https://www.cityofsydney.nsw.gov.au/development-applications/get-advice-city-development-application>).

Definitions

The following terms reference the definitions set out by Australia ICOMOS in the Burra Charter, or terminology utilised by Heritage NSW.

- **Heritage significance:** the historic, aesthetic, scientific or social value of a place, for past, present or future generations.
- **Fabric:** all the physical material of a place, including its building materials, fixtures, finishes and other elements.
- **Conservation:** all the processes of looking after a place so as to retain its heritage significance. This can include maintenance, preservation, restoration, reconstruction and adaptation.
- **Maintenance:** the continuous protective care of a place and its fabric.
- **Preservation:** maintaining the fabric of a place in its existing state and slowing down deterioration.
- **Restoration:** returning existing fabric to a known earlier state, for example by removing later changes or reassembling existing parts.
- **Reconstruction:** returning a place as nearly as possible to a known earlier state, usually by introducing materials.
- **Adaptation / adaptive reuse:** changing a place to suit an existing or proposed use while respecting its heritage significance.
- **Compatible use:** a use that respects the cultural significance of a place and has little or minimal impact on that significance.
- **Setting:** the area around a place, which may contribute to how its heritage significance is understood and experienced.
- **Local heritage exemption:** written confirmation from Council that minor works or maintenance can proceed without development consent because they will not adversely affect heritage significance. This requires a heritage exemption application to be lodged online using our ePlanning service and written confirmation from us (Council) before you start.
- **Statement of Heritage Impact:** a report that explains how proposed works may affect the heritage significance of a place and how impacts can be avoided or reduced. This is consistent with NSW heritage guidance and common planning practice. (<https://www.environment.nsw.gov.au/publications/guidelines-preparing-statement-heritage-impact>)
- **Like-for-like:** replacing or repairing an element using matching or very similar materials, design, dimensions, finish and appearance, so the heritage character is maintained.
- **Sympathetic:** A sensitive approach wherein changes and alterations to the site do not impact the heritage significance.

Specific Guidelines

This guidance is provided so that owners and Council officers have a shared understanding of what elements of 1–5 Clement Street do and do not contribute to its significance and what can be altered without detailed investigation.

These management recommendations outline general guiding principles for managing and maintaining significant elements of the place. They do not override strata by-laws and works must still be structurally adequate and installed in accordance with manufacturer's specifications and comply with the Building Code of Australia (BCA) and other planning controls. Heritage exemptions are assessed on a case-by-case basis and written confirmation from Council should be obtained before proceeding.

General management guidelines

All work undertaken to 1–5 Clement Street should aim to be sympathetic to the place’s identified heritage values and significance.

In general, works should seek to reinstate missing or altered original elements where possible. For example, replacement of non-original windows should seek to reinstate windows with a design and materials sympathetic to the originals.

Any proposal for non-minor work or work that will impact significant building features or fabric should be prepared in consultation with a heritage specialist and be assessed through a Statement of Heritage Impact. Works that will result in an impact to the heritage significance of the place should be avoided.

All conservation, adaptive reuse and future development should be undertaken in accordance with the Australia ICOMOS Charter for Places of Cultural Significance (The Burra Charter) and under the supervision or guidance of a heritage specialist.

Where major changes are proposed to the item, a Heritage Asset Action Plan (HAAP) should be prepared for the place following the relevant Heritage NSW guidelines to guide future use, maintenance and development and ensure its heritage values are well understood by the building owners and managed appropriately.

It is recommended that unit owners or strata managers consult with the City of Sydney through its Duty Planner service prior to a heritage exemption application or DA submission to determine whether works are exempt from development consent or to develop strategies and mitigation measures to assist in the application and approval process.

Applications for any external or vertical additions to the item or ancillary development within the property boundary should be appropriately located, sympathetic to the identified heritage values and not have a major material or visual impact.

Textured concrete is to remain unpainted and unrendered.

Original features such as circular window and wall and floor finishes to the foyer should be retained where practical.

Where removal of hazardous materials is required for health and safety purposes, they must be replaced with sympathetic, like-for-like alternatives.

The landscape elements at the ground level such as the mature trees, plantings, swimming pool, paving and grassed area should be retained.

The installation of a whole of building, coordinated air conditioning systems is encouraged in preference to single occupancy split systems, or window or wall mounted units.

General maintenance, repairs and service upgrades

The following works can typically be undertaken with Council’s written confirmation after a local heritage exemption application provided they adopt a like-for-like approach to materials, colour schemes, dimensions and finishes, and do not impact the identified heritage values of 1–5 Clement Street or alter its external appearance:

- maintenance, repairs and conservation works to building façades such as repainting of rendered surfaces, repairs to concrete spalling;
 - maintenance, repairs and conservation works to gutters, downpipes and other rainwater goods and flashings;
 - works and activities associated with the ongoing maintenance of existing external communal areas limited to roadways, carparks, verges, drainage, pedestrian pathways and steps;
 - works associated with the ongoing maintenance of the ground level landscape elements such as the swimming pool, mature trees, recreational space, paving, plantings and grassed area;
 - works associated with the maintenance, repair, renewal and upgrade of services and utilities including communications, water, gas and electricity—these works must utilise existing conduits and fixings where possible; if new penetrations are required, they should be located in less visually prominent areas and non-significant fabric;
 - installation of new services where this will not have an impact on the visual appearance of the building or exceed the existing building parapet; and
-

-
- works and activities associated with the maintenance, repair, or upgrade of mechanical plant where this does not increase the existing scale or exceed the height of the existing plant.

Apartment interiors

Individual apartment interiors are not included in the heritage listing. Internal renovations, repairs and maintenance work to bathrooms, kitchens, living rooms and bedrooms would not require heritage approvals provided they are not visible from common areas and do not impact structural walls and do not alter the size or pattern of windows or enclose external openings. These activities/works must be carried out in accordance with the building's strata by-laws and relevant planning controls.

Common areas

The following works can typically be undertaken with Council's written confirmation after a local heritage exemption application is submitted provided they adopt a like-for-like approach to materials, colour schemes, dimensions, placement and finishes, and do not impact the identified heritage values of 1–5 Clement Street or alter its external appearance:

- removal, repair and replacement of non-original building elements such as the pool;
- installation of bike racks, safety mirrors and electric-vehicle charging facilities within the carparking area;
- works associated with the maintenance, repair, renewal and upgrade of services and utilities including communications, water, gas and electricity—these works must utilise existing conduits and fixings where possible; if new penetrations are required, they should be located in less visually prominent areas and non-significant fabric; and
- maintenance, repairs and upgrades to the roof including waterproofing, repair or replacement and the installation, upgrade or maintenance of utilities.

The following minor works to common areas works are unlikely to require heritage approval:

- the removal and replacement of non-original flooring;
- installation of non-slip surface treatments;
- repainting of common areas;
- upgrades and replacement of lighting and smoke alarms; and
- other minor repairs and maintenance.

Lifts

Maintenance, repair or upgrade activities to lifts which do not result in the vertical or horizontal expansion of the lift shaft and overrun can typically be undertaken without Council's written confirmation provided they do not materially or visually impact on the identified heritage values of 1–5 Clement Street or alter its external appearance.

Major lift repairs or replacement may require a local heritage exemption application or development application, depending on the nature and extent of the works.

Windows

Replacement, refurbishment, repairs or modifications to anodised aluminium window frames and glazing (such as the installation of double glazing, re-sealing, waterproofing, glazed panel replacement, removal of air conditioning units and hardware repair) can be carried out with Council's written confirmation after a local heritage exemption application is submitted provided works:

- adopt a like-for-like approach replacing or reinstating bronze anodised aluminium frames and clear glass windows;
 - maintain the original fenestration pattern and external reveal depth defined by window bands and sliding doors; and
 - remove detracting elements such as air conditioning units (replacement with more sympathetic alternatives is encouraged).
